BEFORE YOU START

Transportation & Storage

- When transported, the Grad® rails should be secured in their original packaging and should be stored indoors before installation.
- Grad® rails can be stored outdoors for short periods of time just before being used
- For decking boards storage and installation, always refer to guidelines from manufacturers
- Only material that has been grooved to Grad's specifications can be used with Grad® rails
- No heavy object should be stored on top of the rails to avoid possible damage and/or distortion of the rails.

Safety Guidelines

- Wear protective clothing and safety equipment such as safety glasses, gloves, long sleeves, and a mask, particularly when cutting aluminum
- The installer is responsible for identifying and following all building codes and construction safety practices
- Grad® accepts no liability or responsibility for the improper installation of this product
- Grad® recommends that all applications be reviewed by a licensed architect, engineer or local building official before installation.

Tools to have at your disposal for the deck installation

- Measuring tape
- Pencil
- Safety gloves + goggles
- Ear protection
- Wrench
- Level
- Drill
- Saw
- Table saw

PLAN THE DECK

Step 1 → Assemble pedestals

The configurations

Basic model:
35 to 55 mm

Basic model +
1 pair of boosters:
up to 100 mm

Basic model +
2 pairs of boosters:
up to 145 mm

Basic model +
3 pairs of boosters:
up to 190 mm

WATCH ON YOUTUBE

For height superior to 190 mm, it is necessary to add Stiffners

Basic model + 4 pairs of boosters or more + Stiffners TOP+ : 35 to 400 mm

PLAN THE DECK

Step 1 → Assemble pedestals

PLAN THE DECK

Step 2 → Snap pedestals on rails

INSTALLING THE RAILS

with pedestals + spanners

Assemble the structure:

INSTALLING THE RAILS

with pedestals + spanners

Place the spanners
on the floor

Place the rails
according to the
drawing.

Snap on the
spanners under
the rails

LEVEL THE STRUCTURE

For curved planks, the structure must be completely level

For flat planks, the structure must have a 2%

FIX TOP CUBES + SKIRTING BOARDS

Fasten the finishing timber plank

WATCH ON YOUTUBE

FIX TOP CUBES + SKIRTING BOARDS

ADAPT THE STRUCTURE

for windowsills + door thresholds
+ pool borders + more

To avoid the boards being cantilevered, be sure to leave a space of 10 cm maximum between the rail and the wall.

If the rail is placed horizontally, make sure to leave enough space for the disassembly keys to pass, should you need to change the board.

SNAP BOARDS ON CLIPS

Lay the planks

Lay the planks by hand and gently step along the plank to snap it onto the rails. Do not use a hammer or other tools that may damage the boards.

Make sure to leave a space between 3 and 5mm between the ends of the planks to allow for expansion of the wood.

For composite planks, refer to the manufacturing guide.

Skirting boards should be installed before the terrace planks.
